This is certainly a mid-depth (18") sliding shelf created for mid-sized rack enclosures Set up: This was the almost all difficult product to install out of everything in my build.. I only got a limited amount of room to put the rack in the wall structure My concern has been that in the mechanised room you can see there is definitely the furnace to the best and a stud working in the middle of where I need to put the rack.

Obtaining the shelf into the rack/rail space required quite a little bit of force, creative reasoning, and execration.. There were no instructions integrated, and it took a contact into Rising Electronics support to figure out particularly how to connect the rear side rails to the main unit (response: There are usually 4x anchoring screws with nut products on the main rails, and these should become taken out, the back rails placed with the hollow side dealing with out, and the screws/nuts set up in one of the slots at the preferred position).. There were problems with the components/rails appropriate into the housing, and required a innovative workaround to get in place.. My largest component in the rack will be the recipient and it will be 17" broad.

Consensus: 4/5 stars - High high quality once installed, but quite challenging to set up/assemble.. Therefore I wished the ditch for the rack to have at least 1/2" on each part so I needed to create the hole 18" wide. [Alpha Headline Font](#)
